Gennaro Tedesco

Curriculum Vitae

Current Position

2023–present: **Team Lead AI and software engineering** at Finlink, Berlin.

Responsible for a team owning AI-driven automation in the mortgage and banking domain. Introduction of document classification and information extraction, as well as conversational AI interfaces dispatching agents to automate several operations across our software (including automation of clearing, scoring and submission workflows). Implementation of RAG and knowledge base systems, development of internal MCP servers to expose functionalities and internal data. As manager, my role is to ensure that company objectives are efficiently translated into software features, as well as to supervise the entire development, architecture and infrastructure process.

Furthermore, I have led the introduction of sdd assisted development, automating specs and implementation agents for internal use.

Experience

2021–2023 **Tech lead data science**, Billie, Berlin.
Team lead supervising development of machine learning services in payment and identification domain: payment validation, identification of suspicious buyers and credit risk. My role was to direct the entire development process, from the initial business requirements through the scientific phase of model development to service integration in our platform.

2019–2021 **Senior data scientist**, Billie, Berlin.
Introduction and development of the entire area of NLP in the financial domain to assess risk and detect fraud. Language model classification with general deep learning algorithms on structured text; time series analyses in the financial domain and test of hypotheses for statistical significance. Development and deployment of (internal) applications for business intelligence.

2016–2019 **Data scientist**, Leverton, Berlin.
Development of deep learning models in NLP with corresponding classification algorithms. Implementation of predictive models, time series analyses (also ARIMA) and hypotheses tests. Development of internal applications for business intelligence.

2015–2016 **Data scientist**, HelloFresh, Berlin.
Development of prediction and forecasting models for customer churn and acquisitions. Study of time series behaviours, network analyses, implementation of machine learning algorithms for classification and regression.

2014–2015 **Data Analyst**, Bank of America Merrill Lynch, London.

Frameworks and computer languages

Languages	Python, R, Go, Lua, SQL, bash, awk, LaTeX, Rust
ML	Pytorch, Tensorflow, Keras, HuggingFace, BERT
AI	Claude code, opencode, openAI
Cloud	Azure (and Foundry), AWS
Infrastructure	Docker, Kubernetes, Kafka, Redis, Terraform, Helm, Avro, argoCD
Cli	jq, visidata, sed, awk, dvc, gnu core utils
Monitoring	Grafana, Kibana (ELK), Sentry, Tableau, Sisense

Personal projects:

- Author of several neovim plugins and command line applications
- Contributor to the open source e-reading ecosystem
- Invited speaker for podcasts and meetups

I regularly contribute to open source projects, mainly in the area of cli programmes and neovim codebase.

Thanks to my last two employers I have undergone management training focussed on leading software teams in growing companies, as well as conflict resolution.

Academic Education

2011–2014 **PhD in theoretical physics**, Georg August University of Göttingen, magna cum laude. PhD thesis *"Modular structure of chiral Fermi fields in low dimensional conformal field theory"*.

2005–2011 **Master degree in theoretical physics**, University of Naples, 110/110 cum laude. Thesis *"Discrete quantum field theory of the gravitational field"*.

Languages

Italian	**Mother tongue**
English	**Fluent**
German	**Very good**
Chinese	**HSK 1**

Interests

- I play basketball and chess and hold a national chess arbiter license
- I played a major role in a short film (available online) about cultural exchanges among different countries at a high academic level
